Indianapolis, IN 46219

Subject: **Site Assessment Report**
Dixon Road Site
1114 South Dixon Street, Kokomo, Howard County, Indiana
Technical Direction Document No. TO-01-12-10-1012
OTIE Contract No. EP-S5-10-10

Dear Ms. Lam:

OTIE is submitting the enclosed Site Assessment Report for the Dixon Road Site in Kokomo, Indiana. If you have any questions or comments about the report or need additional copies, please contact me at (312) 220-7000 x24 or Raghu Nagam at (312) 220-7005.

Sincerely,

Santino Nardulli

Santino Nardulli
Project Manager

1. INTRODUCTION

The United States Environmental Protection Agency (U.S. EPA) has tasked Oneida Total Integrated Enterprises (OTIE) with the performance of a Site Assessment at the Dixon Road Site. OTIE has prepared this Site Assessment Report in accordance with the requirements of U.S. EPA Technical Direction Document (TDD) No. TO-01-12-10-1012 issued under the Superfund Technical Assessment and Response Team (START) contract No. EP-S5-10-10. The scope of this TDD was to conduct a Site Assessment at the Dixon Road Site (Site) in Kokomo, Howard County, Indiana. START was tasked to prepare a site-specific Health and Safety Plan, field sampling and analysis plan, subcontract an analytical laboratory, conduct surface and subsurface soil contamination investigation with drilling subcontractor, collect surface and subsurface soil samples, evaluate analytical data, document on-site conditions with written logbook notes and still photographs, and prepare this Site Assessment Report. On December 3, 2012, Santino Nardulli, the START Project Manager, along with OTIE employees Elisa Walker, and Carly Schulz, conducted field assessment activities along with the On-scene Coordinator (OSC) Shelly Lam and Indiana Department of Environmental Management's (IDEM) Senior Environmental Manager, Steve Yeary.

This Site Assessment Report summarizes the Site background; discusses the assessment activities; provides a summary of the analytical data; and discusses potential site-related threats. The Appendix for this report includes Site figures (Appendix A), a photographic log of the Site (Appendix B), the soil boring logs (Appendix C), and Validated Analytical Data Sheets (Appendix D).

2. SITE BACKGROUND

This section provides Site background information and the history of the Site.

2.1 Site Description

The Dixon Road Site (Site) is located at 1114 S. Dixon Road in Kokomo, Indiana. The Site occupies approximately 9.76 acres and is currently owned by The Vernon L. Graves Revocable Living Trust. The geographical coordinates for the approximate center of the site are 40.47457 degrees north latitude and 86.16209 degrees west longitude (Figure 1 – Site Location Map). The area surrounding the Site is a mix of residential and industrial properties with the former Kokomo municipal landfill located to the South. The Site is surrounded by Dixon Road to the west, commercial properties to the north, the former Kokomo municipal landfill to the south, and the Haynes Corporation along with a former railroad to the east. The Haynes Corporation facility manufactures nickel and cobalt alloys and operates their own landfill onsite. The Wildcat Creek borders the Site on the north side and flows west towards Wabash River near Lafayette, IN.

2.2 Site History

During the 1930's and 40's, the Site was the location of an agricultural chemical manufacturer. Prior to 1951, the Site along with the Kokomo Municipal landfill located at 1130 South Dixon Road, Kokomo, IN. were listed under a single chain of title. Since 1951, these two parcels of land were separated, owned and operated for a variety of businesses by several different owners. The Vernon L. Graves Revocable Living Trust (the Trust) is the current owner of record for the Site. The Site is currently operating as a metal recycling facility under a lease from the Trust. Prior to metal recycling operations, this Site was used as a salvage yard for a towing company. In August 2011, a site assessment was conducted on the adjacent Kokomo municipal landfill by START. This site assessment sample analytical results indicated elevated levels of lead and arsenic in the surface soil and drum samples. Based on these results, U.S. EPA tasked OTIE, the START contractor, to conduct surface and subsurface soil contamination investigation at the Site.

3. SITE ASSESSMENT ACTIVITIES

Site Assessment (SA) activities at the Site, including site reconnaissance and sampling activities, are discussed below. U.S. EPA, IDEM, and START performed the Site assessment, which included conducting surface and subsurface soil contamination investigation with drilling subcontractor, Ark Engineering Services Inc., and the collection of surface and subsurface soil samples.

A site-specific Sampling and Analysis Plan (SAP) was developed for the SA prior to conducting fieldwork activities. The SAP described the data quality objectives (DQO), sampling strategy, sampling locations, sampling methodology, and analytical procedures that would be used during the SA.

This section summarizes field investigation activities including Site reconnaissance (subsection 3.1) and, preliminary screening and sampling activities (subsection 3.2). Tables 1 and 2 summarize preliminary screening of surface, and subsurface soil. Photographic documentation is provided in Appendix A.

3.1 Site Reconnaissance

On December 3, 2012, OSC Shelly Lam, IDEM's Steve Yeary, and START members Santino Nardulli, Elisa Walker, and Carly Schulz mobilized to the Site and met with the drilling subcontractor, Ark Engineering services and the Site owner Mr. Graves. A Health and Safety meeting was conducted prior to the Site reconnaissance to discuss Site related threats, required personal protective equipment (PPE) and the route to the hospital. Site reconnaissance activities were conducted in Level "D" PPE gear in accordance with the approved site-specific Health and Safety Plan (HASP).

Prior to conducting the Site reconnaissance, START calibrated field equipment which included a ppb RAE, a Thermo TVA 1000 (TVA 1000), and Delta X-Ray fluorescence (XRF) spectrometer. The ppb RAE included a photoionization detector (PID) which screened for volatile organic compounds (VOCs), the TVA 1000 monitored for organic vapors utilizing PID and flame ionization detection (FID), and the XRF was used to detect the presence of arsenic, cadmium, chromium, lead, mercury, and silver. All field equipment was utilized for pre-sampling screening of surface and subsurface soil.

Site reconnaissance activities were conducted inside the fenced area west of the entrance gate of the salvage yard (Figure 2). Adjacent to the entrance gate on the east side stands a building that houses the salvage yard's daily operations. Reconnaissance activities followed a "U" shaped pattern that spanned the perimeter of the site beginning on the northwest portion of the Site and concluding on the

southwestern portion of the Site. Areas of inspection included treks of land near the inactive railroad tracks and the Wildcat Creek. During the reconnaissance, several tires and miscellaneous debris was observed, which according to Mr. Graves, are the remnants of the former dumping and salvage operations that occurred at the Site. Drums were observed among the debris, and they varied in their size, condition, and contents, if any. Surface soil staining was observed all along the perimeter of the Site as well as evidence of burning and chemical crystallization. At the time of the reconnaissance, the southern half of the property was being used as the active drop-off area for all current salvage activities.

3.2 Preliminary Screening and Sampling

After the Site reconnaissance, U.S. EPA, START, and IDEM conducted preliminary screening of surface and subsurface soil inside the "U" shaped perimeter of the Site. The objective of preliminary screening was to identify the existence of soil contamination and to select samples for laboratory analysis.

3.2.1 Surface Soil Investigation

Prior to surface sampling activities, preliminary screening for metals was conducted with the XRF to identify levels of arsenic, cadmium, chromium, lead, mercury, and silver in the Site surface soil. Screening areas were determined according to the findings of the initial Site reconnaissance. Areas that contained heavy visual staining, remnants of drum debris, and/or abnormalities on the soil surface were targeted as areas of interest. Thirty surface soil areas were prescreened prior to collecting laboratory samples. Results of surface soil screening are presented in Table 1.

Table 1
Surface Soil XRF Screening Data
Dixon Road Site Assessment

*-indicates screening result was in percent and not ppm

3.2.2 Subsurface Soil Boring Investigation

Subsurface soil sampling was conducted to determine the presence or absence of contaminated soils, depth of waste material, and the need for removal actions. A total of 13 soil borings were advanced along the "U"-shaped perimeter and center of the Site in order to obtain a general contamination profile of the Site. A direct push Geoprobe® 5410 mounted on a Ford F-350 pickup truck, and operated by OTIE's drilling subcontractor, Ark Engineering Services Inc. was used to conduct the investigation. Soil boring locations are indicated in Figure 3 and are identified with labels "Dixon Road SA DX X-X'." Soil borings were advanced to a minimum depth of four feet below ground surface (bgs) with approximately every third boring being advanced to a depth of 12 feet bgs to assess the depth of waste. Once advanced, each four-foot boring core interval was screened with the ppb RAE and TVA 1000 equipment. Upon completion of the boring, the four-foot boring core intervals were placed in designated plastic bags in order to be screened again (secondary screening) by the TVA 1000 and XRF. Secondary screening results of the soil boring intervals are listed in Table 2. Typical soil borings consisted of brown, silty soil with various colored staining and rock/pebble debris. Moisture typically began to be observed within the 4-8' interval and beyond. Copies of the completed soil boring logs are provided in Appendix B.

Table 2
Subsurface Soil Screening Data
Dixon Road Site Assessment
Kokomo, Indiana

Screening ID	Description	Depth (feet)	PID[1] (ppm)	FID[1] (ppm)
D1	Dark brown silty soil with light brown and white mottling	1-4	4.71	4.97
D2	Dark brown silty soil with light brown and white mottling	1-4	4.48	3.30
D3	**Dark brown silty soil with rust colored mottling**	**1-4**	**4.60**	**3.72**
	Black moist backfill soil with light brown and rust colored mottling	**4-8**	**5.55**	**76.54**
	Black moist backfill soil with red brick	**8-12**	**5.85**	**43.80**
D4	**Dark brown silty soil with rust and black staining**	**1-4**	**4.36**	**3.38**
D5	Dark brown silty soil with rust and tan staining	1-4	4.56	2.49
D6	**Dark brown and rust colored silty soil with fill rock and black staining**	**1-4**	**4.47**	**4.40**
	Dark brown/black moist silty soil with rust colored staining and rocks	**4-8**	**4.63**	**7.69**
D7	**Dark brown/black silty soil with roots and rocks**	**1-4**	**4.57**	**3.27**
D8	Black silty soil with pebbles, and tan and rust colored staining	1-4	4.45	3.18
D9	Dark brown silty soil with black, brown, and rust colored staining; slight moisture	1-4	4.23	2.68
	Black moist soil	4-8	4.59	3.51
	Black moist soil	8-12	40.7	23.76
D10	Dark brown and tan silty clay with pebbles and rust colored staining	1-4	4.60	2.90
D11	Dark brown silty clay with crushed rock remnants	1-4	5.25	19.52
	4-6': Dark brown silty, sandy clay 6-8': Tan, sandy, rocky silt with red and gray staining	**4-8**	**4.73**	**4.35**
	Light brown silty, rocky soil	8-12	4.83	8.53
D12	**Dark brown silty soil with rocks and tan staining**	**1-4**	**4.67**	**11.56**
D13	**Black, moist silty clay with rust and tan colored staining**	**1-4**	**4.89**	**4.02**
	Dark brown silty soil with rocks and gray/tan colored staining	4-8	4.75	4.55
	Black silty clay with dark brown and red staining	8-12	4.83	8.15

Notes:
Shaded and bolded rows indicate samples submitted for laboratory analysis
PID - Photoionization Detector
FID - Flame ionization Detection
ppm - parts per million
[1] -Indicates secondary screening results. Initial screening results are displayed on boring logs in Appendix C

3.2.3 Analytical Sampling

Surface and subsurface samples for laboratory analyses were collected based on preliminary XRF, TVA 1000, and ppb RAE readings. Representative surface and subsurface soils from varying depths that exhibited high readings on monitoring equipment were submitted for laboratory analysis.

Eight surface soil samples (denoted by DR-SUR-XX), and one duplicate surface soil sample were collected and submitted to ALS Laboratories, Holland, MI. (ALS) for analysis of total and Toxicity Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) 8 Metals, total polychlorinated bi phenyls (PCBs), pesticides, and hexavalent chromium (hex-chrome). DR-SUR-09 is a duplicate surface soil sample of DR-SUR-01 sample. Samples were collected while wearing modified Level D PPE. Using dedicated stainless-steel spoons and zip lock bags, composite samples were collected from each surface sampling area. The collected samples were thoroughly mixed in the zip lock bag, and spooned into a 16-ounce glass jar. Sample jars were labeled with specific Sample IDs, and preserved on ice.

A total of 11 subsurface soil samples were collected. A duplicate sample was also collected from soil boring Dixon Road SA D12 1-4' and was labeled as Dixon Road SA D12A 1-4'. Samples were submitted to ALS for analysis of RCRA 8 metals, TCLP RCRA 8 metals, total PCBs, pesticides, and hexavalent chromium (hex-chrome). Additionally, samples Dixon Road SA D3 4-8' and Dixon Road SA D11 4-8 were also analyzed for total semi-volatile organic compounds (SVOCs), and TCLP SVOCs. Two matrix spike/matrix spike duplicate (MS/MSD) samples were collected from Dixon Road SA D12 1-4' and Dixon Road SA D13 1-4' as part of the quality assurance/quality control (QA/QC) protocols. Samples were collected while wearing modified Level D PPE. Using dedicated stainless-steel spoons and poly lined stainless-steel bowls, a composite sample was collected from each 4-foot subsurface interval. The samples were then mixed thoroughly in the poly-lined bowl and spooned into a 16-ounce glass jar. Sample jars were labeled with site-specific sample identification numbers IDs and preserved on ice.

START prepared the sample jars with labels, completed the chain of custody and preserved all sample bottles on ice. START secured the samples inside a cooler for transportation. All laboratory submitted samples had a standard turnaround time of 5 working days.

4. ANALYTICAL RESULTS

START reviewed the sample analytical data and supporting QA/QC data provided by ALS Laboratory in Holland, MI. The validated analytical data package is included in Appendix D. Based on START's data validation, the data are acceptable for use as qualified.

4.1 Surface Soil Analytical Results

Nine surface samples including one duplicate were submitted for total and TCLP RCRA 8 metals, total PCBs, pesticides, and hex-chrome analysis. All submitted samples exceeded the lead Removal Management Levels (RML) value of 800 milligram per kilogram (mg/Kg) while sample DR-SUR-07 also exceeded the RML value of 560 mg/Kg for chromium hexavalent. Surface soil samples DR-SUR-03, DR-SUR-07 and DR-SUR-08 exceeded TCLP criteria for lead while DR-SUR-08 also exceeded TCLP criteria for cadmium. All detected analytical results for surface soil samples are shown in Table 3

4.2 Subsurface Soil Analytical Results

On December 3, 2012, 13 subsurface samples including a duplicate and two QA/QC sample were collected by START for total and TCLP RCRA 8 metals, total PCBs, pesticides, and hex-chrome analysis. Sample IDs Dixon Road SA D3 4-8', and Dixon Road SA D11 4-8' underwent additional analyses for total and TCLP SVOCs. Analytical results of the laboratory samples are shown in Table 4. Lead and PCBs (Aroclor 1248) were detected and exceeded EPA's RMLs in Industrial Soil. Carcinogenic target risk values were used to compare these results and their exceedences under RMLs. Lead exceeded the RML value of 800 mg/Kg in all 11 samples submitted for analysis. Aroclor 1248 exceeded in sample IDs Dixon Road SA D3 4-8' and Dixon Road SA D12 1-4'.

Sample analytical results were also evaluated against the criteria of characteristics of hazardous waste per 40 Code of Federal Regulations (CFR), Section 261.24. Subsurface soil sample D12A 1-4' exceeded TCLP criteria of 1 milligram per liter (mg/L) for cadmium. All remaining samples were below TCLP criteria.

5. POTENTIAL SITE RELATED THREATS

Threats posed by the Site were evaluated in accordance with National Contingency Plan (NCP) criteria for initiating a removal action listed under Title 40 of the CFR, Section 300.415(b) (2). Paragraph (b) (2) of 40 CFR Section 300.415 lists factors to be considered when determining the appropriateness of a potential removal action at a Site. Potential site-related threats to human health and the environment were evaluated based on the criteria listed in 40 CFR, Sections 261.20 through 261.24. Factors that are applicable to the Site are discussed below.

Actual or potential exposure of nearby human populations, animals, or the food chain to hazardous substances or pollutants or contaminants

Lead and PCBs were detected above the EPA RMLs for industrial soil in subsurface soil samples collected in December 2012. TCLP limit in cadmium was exceeded in subsurface soil sample Dixon Road SA D12A 1-4'. In surface soil samples, lead and hexavalent chromium exceeded EPA RMLs for industrial soil. The TCLP level of 5 mg/L for lead was exceeded in surface samples DR-SUR-03, DR-SUR-07, and DR-SUR-08 while the TCLP level of 1 mg/L for cadmium was exceeded in surface sample DR-SUR-08. Due to the proximity of surface sample DR-SUR-08 to Wildcat Creek, there is a high potential for lead, and cadmium contamination to migrate off-site. The Site operating as an active salvage yard poses potential exposure to employees, patrons, and potential trespassers to the high levels of lead, PCBs, and cadmium contamination present at the Site.

Adults and children exposed to large amounts of lead can experience brain and kidney damage. Lead exposure in young children can cause reduced IQ and attention span, learning disabilities, developmental delays, and a range of other health and behavioral effects. Short-terms effects to lead poisoning include fatigue, headache, irritability, metallic taste in mouth, poor appetite, reproductive problems and sleeplessness Long-term effects to lead poisoning include kidney problems, memory loss, muscle and joint pains, premature loss of teeth, shortened life span, stomach aches and pains, nausea, weak wrists and ankles, weight loss. Extreme cases of lead poisoning can result in convulsions, coma, or death. The United States Department of Health and Human Services (DHHS) has determined that certain forms of lead, like lead acetate and lead phosphate are anticipated carcinogens (cancer-causing substances).

With prolonged and repeated exposure, cadmium can produce internal organ damage and deterioration. Cadmium is toxic to the kidneys, lungs, and liver and severe over-exposure can result in death. The chemical is slightly hazardous and acts as an irritant in case of skin, and eye contact.

Upon inhalation or ingestion, PCBs may cause respiratory tract irritation. Contact with the skin or eyes can cause irritation, redness, dry skin, and defatting based on the duration.

Hexavalent chromium is a carcinogen that may cause genetic damage, reproductive hazards, impair fertility, and cause harm to an unborn child. When in contact with the eyes, respiratory tract, or skin, irritation and vomiting may occur.

Hazardous substances or pollutants or contaminants in drums, barrels, tanks, or other bulk storage containers, that may pose a threat of release;

Site assessment results documented that there are drums at the Site. The drums were exposed in along the creek bank and lying on the ground surface. Drum contents are unknown but could pose a threat of release.

High levels of hazardous substances or pollutants or contaminants in soils largely at or near the surface that may migrate

TCLP limits of lead and cadmium were exceeded in collected surface and subsurface soil samples. The results of the Site assessment show that levels of lead and/or cadmium can potentially migrate off-site into Wildcat Creek. Lead and cadmium migration may potentially pose risk to downgradient receptor populations.

Weather conditions that may cause substances or pollutants or contaminants to migrate or be released

Leachable concentrations of lead and cadmium are present in site soils. Rain water and snow melt, as they run-off the Site, can mobilize contaminants in the subsurface and surface soil into the nearby Wildcat Creek, which borders the Site to the north.

The availability of other appropriate federal or state response mechanisms to respond to the release

IDEM requested the assistance of U.S. EPA Region 5 Emergency Response Branch to help evaluate and mitigate a possible threat posed by the Dixon Road Site contaminants.

6. SUMMARY

On December 3, 2012, U.S. EPA and START conducted Site assessment activities at the Dixon Road Site in Kokomo, Indiana. IDEM also provided assistance during the field activities. Field screening tests were conducted to analyze several subsurface and surface soil areas prior to sampling activities. Soil samples were collected and submitted for PCBs, total and TCLP SVOCs, total and TCLP metals, pesticides, and hex-chrome analyses.

Subsurface and surface sample analytical results were evaluated against the EPA RMLs for industrial soil and TCLP criteria. Subsurface analytical results indicated RML lead exceedances in all submitted samples. Subsurface samples Dixon Road SA D3 4-8'and Dixon Road SA D12 1-4' exceeded the PCB Aroclor action level of 74 mg/Kg. The TCLP limit of 1 mg/L for cadmium was exceeded in duplicate sample Dixon Road SA D12A 1-4'. Surface analytical results indicated lead RML exceedances in all samples, and a RML exceedance for hex-chrome in surface sample DR-SUR-07. In addition, the lead TCLP concentration of 5 mg/L was exceeded in surface samples DR-SUR-03, DR-SUR-07, and DR-SUR-08. The TCLP limit of 1 mg/L for cadmium was also exceeded in DR-SUR-08. The Site is currently an active metal recycling facility. Patrons, employees , and any undocumented trespassers can potentially be exposed to the high levels of lead, PCBs, cadmium, and hexavalent chromium present at the Site. Thus, conditions exist at the Site that supports a removal action to abate threats to human health and the environment.

MEMORANDUM

Date:	February 11, 2013
To:	Santino Nardulli, Project Manager, Oneida Total Integrated Enterprises (OTIE) Superfund Technical Assessment and Response Team (START) for Region 5
Prepared by:	Carly Schulz, START Chemist for Region 5, OTIE
Quality Assurance (QA)/Quality Control (QC) Concurrence by:	Renea Anglin, START Chemist for Region 4, OTIE
Subject:	Data Validation for: Dixon Road SA 1114 South Dixon Road Kokomo (Howard County), Indiana, 46902 Project Technical Direction Document (TDD) Number: TO-01-12-10-1012 Laboratory: Australian Laboratory Services (ALS) Environmental 3352 128th Avenue Holland, Michigan 49424 Sample Delivery Group (SDG): 1212105

1.0 INTRODUCTION

The START Chemist for Region 5 validated analytical data for 20 soil samples for Total Resource Conservation and Recovery Act (RCRA)-Eight Metals, Toxicity Characteristic Leaching Procedure (TCLP) RCRA-8 Metals, Total Polychlorinated Biphenyl (PCB), Total Pesticides, and Chromium Six. Two (2) soil samples were also validated for Total Semivolatile Organic Compound (SVOC) and TCLP SVOC analysis. Samples were collected at the Dixon Road SA Site on December 3, 2012. The samples were analyzed under SDG 1212105 by ALS Environmental of Holland, Michigan using United States Environmental Protection Agency (U.S. EPA) methods 8270C, 8082A, 8081A, 6020A, 7196A, 7471A, 6020A/7470A.

Laboratory data were validated using guidelines set forth in the U.S. EPA Contract Laboratory Program (CLP) National Functional Guidelines (NFG)s for Organic Data Review (EPA-540-R-08-01, June 2008), NFGs for Inorganic Data Review (EPA-540-R-10-011, January 2010), and applicable methodologies. The purpose of the chemical data-quality-evaluation process is to assess the validity and usability of data for the project decision-making process.

Organic data validation consisted of a review of the following QC audits:

- Chain of custody (COC) and sample receipt forms review
- Sample preservation and holding time (HT)
- Blank results
- Surrogate recoveries
- Matrix spike (MS)/Matrix Spike Duplicate (MSD) recovery results
- Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD) recovery results

Inorganic data validation consisted of a review of the following QC audits:

- COC and sample receipt forms review
- Sample preservation and HT
- Blank results
- Duplicate Sample Results
- LCS/LCSD recovery results
- MS/MSD recovery results

Section 2.0 of this memorandum discusses the results of organic data validation. Section 3.0 of this memorandum discusses the results of inorganic data validation. Section 4.0 of this memorandum presents an overall assessment of the data. The attachment to this memorandum contains the laboratory reporting forms as well as START's handwritten data qualifications where warranted.

2.0 ORGANIC DATA VALIDATION RESULTS

The results of START's organic data validation are summarized below by QC audit reviewed. The data qualifiers listed below were applied to sample analytical results where warranted (see attachment):

- J – The analyte was detected. The reported concentration was considered estimated.
- U – The analyte was not detected.
- UJ – The analyte was not detected. The reporting limit (RL) was considered estimated.

After the START project staff received the data packages, they were inventoried for completeness and then reviewed according to matrix-specific protocols and data quality objectives (DQO)s established for the project.

2.1 TOTAL SVOC SAMPLES BY METHOD 8270C

2.1.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

2.1.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

Total SVOC samples were analyzed within the 14-day extraction and 40-day analysis holding times. No discrepancies were noted.

2.1.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively.

Laboratory method blank (MB) sample (SBLKS1-45188-45188) was run with this SDG. Bis(2-ethylhexyl)phthalate and Butyl benzyl phthalate were both detected between the Practical Quantitation Limit (PQL) and the minimum detection limit (MDL). Samples 1212105-11(Dixon Road SA D3 4-8'), and 1212105-17 (Dixon Road SA D11 4-8') had Bis(2-ethylhexyl) Phthalate detected between the MDL and RL, therefore Bis(2-ethylhexyl) Phthalate was brought up to the RL value and flagged as "U" (undetected). Butyl Benzyl Phthalate was detected in sample 1212105-17 (Dixon Road SA D11 4-8') between the MDL and RL, therefore Butyl Benzyl Phthalate was raised to the RL and flagged as "U".

2.1.4 SURROGATE RECOVERIES

Laboratory performance on individual samples is established by means of fortifying each sample with surrogate compounds (System Monitoring Compounds). Surrogate spike compounds included 2,4,6-Tribromophenol, 2-Fluorobiphenyl, 2-Fluorophenol, 4-Terphenyl-d14, Nitrobenzene-d5, and Phenol-d6.

No anomalies associated with the analysis of these samples were observed.

2.1.5 MS/MSD RECOVERY RESULTS

Data for MS/MSDs are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis.

No MS/MSD was requested for these samples. A MS/MSD was run from another clients sample and was not evaluated.

2.1.6 LCS/LCSD RECOVERY RESULTS

Data for the LCS/LCSD is generated to provide information on the accuracy of the analytical method and on the laboratory performance.

The LCS/LCSD is fortified with the full list of TCLP SVOCs and analyzed with each batch of samples. The LCS/LCSD accuracy performance is measured by Percent Recovery (%R). LCS sample (SLCSS1-45188-45188) was run with this SDG. All analytes were within laboratory derived QC limits.

2.1.7 GENERAL LABORATORY OBSERVATIONS

Due to high non-target analytes, samples 1212105-11 (Dixon Road SA D3 1-4") and 1212105-17 (Dixon Road SA D11 4-8') were run at dilutions of 20 and 10 respectively. Therefore elevated reporting limits were provided.

2.2 TCLP SVOC SAMPLES BY METHOD 8270C

2.2.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

2.2.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

TCLP SVOC samples were analyzed within HT criteria of 14 days for extraction and 40 days for analysis. No discrepancies were noted.

2.2.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively.

Laboratory method blank (MB) sample (SBLKW1-45227-45227) was run with this SDG. There were no analytes detects in the MB and therefore no further action was taken.

2.2.4 SURROGATE RECOVERIES

Laboratory performance on individual samples is established by means of fortifying each sample with surrogate compounds. Surrogate spike compounds included 2,4,6-Tribromophenol, 2-Fluorobiphenyl, 2-Fluorophenol, 4-Terphenyl, Nitrobenzene-d5, and Phenol-d6.

All surrogate recoveries were within QC limits.

2.2.5 MS/MSD RECOVERY RESULTS

Data for MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis.

No MS/MSD samples were requested for this SDG.

2.2.6 LCS/LCSD RECOVERY RESULTS

Data for the LCS is generated to provide information on the accuracy of the analytical method and on the laboratory performance. The LCS were fortified with the full list of SVOCs and analyzed with each batch of samples. The LCS accuracy performance is measured by % R.

The LCS sample (SLCSW1-45227-45227) had all recoveries within acceptable QC limits.

2.2.7 GENERAL LABORATORY OBSERVATIONS

No anomalies were associated with this SDG.

2.3 TOTAL PCB SAMPLES BY METHOD 8082A

2.3.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

2.3.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

Total PCB samples were analyzed within HT criteria of 14 days for extraction and 40 days for analysis. No discrepancies were noted.

2.3.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively. Laboratory method blank (MB) samples (PBLKS1-45199-45199 and PBLKS-45234-45234) were run with this SDG. There were no analytes detects in the MB. Therefore, no further action was taken.

2.3.4 SURROGATE RECOVERIES

Laboratory performance on individual samples is established by means of fortifying each sample with surrogate compounds. Surrogate spike compounds included Decachlorobiphenyl and Tetrachloro-m-xylene.

All surrogates were recovered within acceptable QC criteria. Therefore, no further action was taken.

2.3.5 MS/MSD RECOVERY RESULTS

Data for MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis.

MS/MSDs were extracted from sample (DIXON ROAD SA D12 1-4'). The MS sample (1212105-18A MS) had Aroclor 1016 and Aroclor 1260 spiked and the results were biased-high at 6870 and 709 % R respectively. The MSD sample (1212105-18A MSD) had Aroclor 1016 and Aroclor 1260 spiked in it and the results were biased-high at 5840 and 602 % R respectively. These values were above the quantitation range defined by the laboratory. These high recoveries were due to elevated levels of Aroclors 1248 and 1254 in the parent sample. The Relative percent difference between the MS and MSD samples were within acceptable QC limits and therefore, no further action was taken.

MS/MSD were extracted from sample (DIXON ROAD SA D13 1-4') for batch 45234. The MS and MSD were biased high for both Arochlors due to high levels of AR1248 and AR1254 in the parent sample. The Relative percent difference between the MS and MSD samples were within acceptable QC limits and therefore, no further action was taken

2.3.6 LCS/LCSD RECOVERY RESULTS

Data for the LCS is generated to provide information on the accuracy of the analytical method and on the laboratory performance. The LCS were fortified with Aroclor 1016 and Aroclor 1260 and analyzed with each batch of samples. The LCS accuracy performance is measured by % R.

The LCS recoveries for Aroclor 1016 and Aroclor 1260 in sample (PLCSS1-45199-45199) were both within laboratory control limits. Therefore, no further action was taken.

The LCS recoveries for Aroclor 1016 and Aroclor 1260 in sample (PLCSS1-45234-45324) were both within laboratory control limits. Therefore, no further action was taken.

2.3.7 FIELD DUPLICATES

Data for field duplicates were collected and analyzed for chemical constituents to measure the cumulative uncertainty (i.e., precision) of the sample collection, splitting, handling, storage, preparation and analysis operations, as well as natural sample heterogeneity that is not eliminated through simple mixing in the field. Field duplicates are two samples prepared by mixing a volume of sample and splitting it into two separate sample containers that are labeled as individual field samples.

Sample (DR-SUR-01) had a duplicate collected sample (DR-SUR-09). Aroclor 1248 and Aroclor 1254 were both detected in sample (DR-SUR-01) at 8,600 and 12,000 µg/Kg respectively. Aroclor 1248 and Aroclor 1254 were both detected in sample (DR-SUR-09) at 9,700 and 15,000 µg/Kg respectively.

Sample (DIXON ROAD SA D12 1-4') had a duplicate collected sample (DIXON ROAD SA D12A 1-4'). Aroclor 1248 and Aroclor 1254 were detected in sample (DIXON ROAD SA D12 1-4') at 95,000 and 23,000 µg/Kg respectively. Aroclor 1248 and Aroclor 1254 were detected in sample (DIXON ROAD SA D12A 1-4') at 43,000 and 12,000 µg/Kg respectively.

The RPD was calculated for all detected analytes. A sample calculation using Aroclor 1248 detected in the first set of field duplicates follows:

$$[\qquad\qquad]$$

The RPD for Aroclor 1254 was found to be 22.22% in the first set of duplicates. The RPD for Aroclor 1248 in the second set of duplicates was found to be 75.36 %. The RPD for Aroclor 1254 in the second set of duplicates was found to be 62.86 %. Due to high levels of analytes in samples (DR-SUR-01) and (DR-SUR-09), the samples were diluted by a factor of 5. Samples (DIXON ROAD SA D12 1-4') and (DIXON ROAD SA D12A 1-4') were diluted by a factor of 20. The dilutions resulted in elevated reporting limits, which were provided by the laboratory. The RPDs were all calculated to be under the 100% RPD limit for soil samples. Therefore, no further action is required.

2.3.8 GENERAL LABORATORY OBSERVATIONS

Elevated levels of Aroclors lead to high percent recoveries in MS and MSD samples though RPD values were within range. The LCS for both batches was within QC limits indicating that the batch was within compliance and the difficulty with the MS/MSD is from matrix interference. Several samples required dilution due to the high levels of PCBs in the samples, therefore elevated detection limits were provided. Other than mentioned, no anomalies were associated with this SDG.

2.4 TOTAL PESTICIDE SAMPLES BY METHOD 8081A

2.4.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

2.4.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

Total Pesticide samples were analyzed within HT criteria of 14 days for extraction and 40 days for analysis. No discrepancies were noted.

2.4.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively. Laboratory method blank (MB) samples (PBLKS1-45200-45200 and PBLKS1-45235-45235) were run with this SDG.

There were no analytes detected in the MBs. Therefore, no further action was taken.

2.4.4 SURROGATE RECOVERIES

Laboratory performance on individual samples is established by means of fortifying each sample with surrogate compounds.

Surrogate spike compounds included Decachlorobiphenyl and Tetrachloro-m-xylene. All spike compounds were recovered within acceptable QC limits. Therefore, no further action was taken.

2.4.5 MS/MSD RECOVERY RESULTS

Data for MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis.

No MS/MSD samples were analyzed with this SDG. Therefore, no further action was taken.

2.4.6 LCS/LCSD RECOVERY RESULTS

Data for the LCS is generated to provide information on the accuracy of the analytical method and on the laboratory performance. The LCS were fortified with the full list of Total Pesticides and analyzed with each batch of samples. The LCS accuracy performance is measured by % R.

The LCS recovery for 4,4'-DDT was biased-high at 149 % R outside of the 45-140 % R limits for LCS sample (PLCSS1-45200-45200). The LCS recovery for Methoxychlor was biased-high at 172 % R outside of the 55-145 % R limits. Since 4,4'-DDT and Methoxychlor were undetected in the associated samples, no further action was required.

LCS, PLCSS1-45235-45235, had methoxychlor biased high at 162%R. Since methoxychlor was undetected in the associated samples, no further action was required

2.4.7 FIELD DUPLICATES

Data for field duplicates were collected and analyzed for chemical constituents to measure the cumulative uncertainty (i.e., precision) of the sample collection, splitting, handling, storage, preparation and analysis operations, as well as natural sample heterogeneity that is not eliminated through simple mixing in the field. Field duplicates are two samples prepared by mixing a volume of sample and splitting it into two separate sample containers that are labeled as individual field samples.

Sample (DR-SUR-01) had a duplicate collected sample (DR-SUR-09). Sample (DIXON ROAD SA D12 1-4') had a duplicate collected sample (DIXON ROAD SA D12A 1-4'). No Total Pesticides analytes were detected in either set of duplicate samples. Therefore, no further action is required.

2.4.8 GENERAL LABORATORY OBSERVATIONS

Samples DR-SUR-01, DR-SUR-02, DR-SUR-03, DR-SUR-04, DR-SUR-05, DR-SUR-06, DR-SUR-07, DR-SUR-08, DR-SUR-09, Dixon Road SA D3 1-4', Dixon Road SA D3 4-8', Dixon Road SA D3 8-12', Dixon Road SA D4 1-4', Dixon Road SA D6 1-4', Dixon Road SA D6 4-8', Dixon Road SA D7 1-4', , Dixon Road SA D7 4-8', Dixon Road SA D12 1-4', Dixon Road SA D12A 1-4', and , Dixon Road SA D13 1-4' had several analytes run at dilutions due to matrix interference, therefore elevated reporting limits were provided.

3.0 INORGANIC DATA VALIDATION RESULTS

The results of START's inorganic data validation are summarized below by QC audit reviewed. The data qualifiers listed below were applied to sample analytical results where warranted:

- J – The analyte was detected. The reported concentration was considered estimated.
- U – The analyte was not detected.
- UJ – The analyte was not detected. The reporting limit (RL) was considered estimated.

After the START project staff received the data packages, they were inventoried for completeness and then reviewed according to matrix-specific protocols and DQOs established for the project.

3.1 TOTAL RCRA-8 METAL SAMPLES BY METHOD 6020A

3.1.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

3.1.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

Total RCRA-8 metal samples were analyzed within the U.S. EPA recommended HT of 6 months. No discrepancies were noted.

3.1.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively.

Laboratory method blank (MB) samples MBLK-45248-45248 and MBLK-45237-45237 were run with this SDG.

MB sample MBLK-45237-45237 had Arsenic detected at 0.0375 mg/Kg, Lead at 0.01278 mg/Kg, and Selenium at 0.0227 mg/Kg. These analytes were detected between the MDL and RL. All samples associated with this MB had Arsenic, lead and selenium detected at levels greater than ten times the level in the blank, therefore no further action was necessary.

MB sample MBLK-45248-45248 had Arsenic detected at 0.0449 mg/Kg and Lead at 0.1952 mg/Kg. These analytes were detected between the MDL and RL. All samples associated with this MB had Arsenic, lead and selenium detected at levels greater than ten times the level in the blank, therefore no further action was necessary.

3.1.4 LCS RECOVERY RESULTS

The LCS serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS is fortified with each analyte of interest and analyzed with each batch of samples. The LCS accuracy performance is measured by % R.

The LCS sample (LCS-45248-45248) was within acceptable recovery limits for all analytes. Therefore, no further action was taken.

The LCS sample (LCS-45237-45237) was within acceptable recovery limits for all analytes. Therefore, no further action was taken.

3.1.5 MS/MSD RECOVERY RESULTS

The spiked sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The MS/MSD accuracy performance is measured by % R.

A MS/MSD was performed on sample Dixon Road SA D12 1-4'. Barium, Cadmium, Chromium and Lead could not be evaluated because the levels in the sample were greater than four times the spiked value. Silver was biased low with 45.7 %R in the MS and 50%R in the MSD. Selenium was biased low in the MSD at 73%R. Therefore, Selenium and Silver were flagged as "J" in sample Dixon Road SA D12 1-4'.

MS/MSD samples were extracted from soil sample DIXON ROAD SA D13 1-4'. Barium, Cadmium, Chromium and Lead had results higher than four times the spiked value due to high parent sample concentrations. Therefore, Barium, Cadmium, Chromium, Silver, and Lead results cannot be evaluated.

The recovery for Selenium was biased was biased low in the MS at 57.4%R and the RPD was outside QC limits at 26%R. Therefore Selenium was flagged as "J" in sample DIXON ROAD SA D13 1-4'.

3.1.6 FIELD DUPLICATES

Data for field duplicates were collected and analyzed for chemical constituents to measure the cumulative uncertainty (i.e., precision) of the sample collection, splitting, handling, storage, preparation and analysis operations, as well as natural sample heterogeneity that is not eliminated through simple mixing in the field. Field duplicates are two samples prepared by mixing a volume of sample and splitting it into two separate sample containers that are labeled as individual field samples.

Sample (DR-SUR-01) had a duplicate collected sample (DR-SUR-09). Sample (DIXON ROAD SA D12 1-4') had a duplicate collected sample (DIXON ROAD SA D12A 1-4'). Arsenic, Barium, Cadmium, Chromium, Lead, Selenium, and Silver were detected in sample (DR-SUR-01) at 14, 610, 35, 210, 2000, 1.5, and 5.9 mg/Kg respectively. Arsenic, Barium, Cadmium, Chromium, Lead, Selenium, and Silver were detected in sample (DR-SUR-09) 21, 730, 96, 140, 3000, 1.9, and 9.6 at mg/Kg respectively. Arsenic, Barium, Cadmium, Chromium, Lead, Selenium, and Silver were detected in sample (DIXON ROAD SA D12 1-4') at 22, 520, 71, 210, 2400, 1.4, and 16 mg/Kg respectively. Arsenic, Barium, Cadmium, Chromium, Lead, Selenium, and Silver were detected in sample (DIXON ROAD SA D12A 1-4') at 23, 460, 75, 220, 1800, 1.4, and 18 mg/Kg respectively.

The RPD was calculated for all detected analytes. A sample calculation using Arsenic detected in the first set of field duplicates follows:

$$(|14-21|)/[(14+21)/2] \ *100=7/17.5*100=40\ \%$$

Due to high levels of analytes in samples (DR-SUR-01), (DR-SUR-09), (DIXON ROAD SA D12 1-4'), and (DIXON ROAD SA D12A 1-4'); the samples were diluted. The dilutions resulted in elevated reporting limits, which were provided by the laboratory. The RPDs were all calculated to be under the 100% RPD limit for soil samples. Therefore, no further action is required.

3.1.7 GENERAL LABORATORY OBSERVATIONS

No anomalies were associated with this SDG.

3.2 TCLP RCRA-8 METAL SAMPLES BY METHOD 6020A

3.2.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

3.2.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

TCLP RCRA-8 metal samples were analyzed within the U.S. EPA recommended HT of 6 months. No discrepancies were noted.

3.2.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively.

Laboratory method blank (MB) sample (MBLK-45244-45244) was run with this SDG. Lead was detected between the MDL and the PQL in the MB sample. Lead was detected in all the samples at greater than 10 times the level detect in the blank, therefore no further action was taken.

3.2.4 LCS RECOVERY RESULTS

The LCS serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS is fortified with each analyte of interest and analyzed with each batch of samples. The LCS accuracy performance is measured by % R.

The LCS sample (LCS-45244-45244) was within acceptable recovery limits of 80-120 % R for all TCLP RCRA-8 analytes.

3.2.5 MS/MSD RECOVERY RESULTS

The spiked sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The MS/MSD accuracy performance is measured by % R.

MS sample (1212105-38AMS) and MSD sample (1212105-38AMSD) were extracted from TCLP extract for sample (DIXON ROAD SA D12 1-4'). MS sample (1212105-40AMS) and MSD sample (1212105-40AMSD) were extracted from TCLP extract for sample (DIXON ROAD SA D13 1-4').

No discrepancies were noted for the MS/MSD for sample DIXON ROAD SA D12 1-4' TCLP.

The MSD for DIXON ROAD SA D13 1-4' TCLP had barium biased low at 74%R. Barium was within QC limits for the MS, and RPD was within QC limits, therefore no further action was taken.

3.2.6 FIELD DUPLICATES

Data for field duplicates were collected and analyzed for chemical constituents to measure the cumulative uncertainty (i.e., precision) of the sample collection, splitting, handling, storage, preparation and analysis operations, as well as natural sample heterogeneity that is not eliminated through simple mixing in the field. Field duplicates are two samples prepared by mixing a volume of sample and splitting it into two separate sample containers that are labeled as individual field samples.

Sample (DR-SUR-01) had a duplicate collected sample (DR-SUR-09). Sample (DIXON ROAD SA D12 1-4') had a duplicate collected sample (DIXON ROAD SA D12A 1-4'). Barium, Cadmium, and Lead were detected in sample (DR-SUR-01) at 0.81, 0.33, and 0.55 mg/L respectively. Barium, Cadmium, and Lead were detected in sample (DR-SUR-09) at 0.98, 0.20, and 4.5 mg/L respectively. Barium, Cadmium, and Lead were detected in sample (DIXON ROAD SA D12 1-4') at 1.5, 0.93, and 1.0 mg/L respectively. Barium, Cadmium, and Lead were detected in sample (DIXON ROAD SA D12A 1-4') at 1.0, 2.2, and 1.2 mg/L respectively.

The RPD was calculated for all detected analytes. A sample calculation using Barium detected in the first set of field duplicates follows:

$$(|0.81-0.98|)/[(0.81+0.98)/2] *100=0.17/0.895*100=18.99\ \%$$

The RPDs were all calculated to be under the 100% RPD limit for soil samples except for Lead in both sets of duplicates, which was calculated to be 156.44% and 133.33% respectively. Therefor Lead was flagged as "J" in samples DR-SUR-01, DR-SUR-09, DIXON ROAD SA D12 1-4', and DIXON ROAD SA D12A 1-4'.

3.2.7 GENERAL LABORATORY OBSERVATIONS

Sample SR-SUR-07-TCLP required a dilution for lead, therefore elevated reporting limits were provided.

3.3 TOTAL CHROMIUM (Cr)-Six (VI) SAMPLES BY METHOD 7196A

3.3.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

3.3.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

Total Chromium samples were analyzed within the recommended HT of 30-days for extraction and 7 days from extraction to analysis for soil samples. No discrepancies were noted.

3.3.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively.

Laboratory method blank (MB) samples (MBLK-45212-45212) and (MBLK-45225-45225) were run with this SDG. There was no Hexavalent Chromium detected in either MB sample. Therefore, no further action was taken.

3.3.4 LCS RECOVERY RESULTS

The LCS serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS is fortified with each analyte of interest and analyzed with each batch of samples. The LCS accuracy performance is measured by % R.

The LCS sample (LCS-45212-45212) and (LCS-45225-45225) were within acceptable QC limits of 75-110 % for hexavalent chromium.

3.3.5 MS/MSD RECOVERY RESULTS

The spiked sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The MS/MSD accuracy performance is measured by %R.

MS sample (1212105-18AMS) and MSD sample (1212105-18AMSD) were extracted from soil sample (DIXON ROAD SA D12 1-4'). MS sample (1212105-20AMS) and MSD sample (1212105-20AMSD) were extracted from soil sample (DIXON ROAD SA D13 1-4').

The recoveries for Chromium Six (Cr-6) were outside of the acceptable QC limits of 60-130 % R. Both MS/MSD sets showed no recovery for hexavalent chromium, indicating matrix interference from the samples. Samples DIXON ROAD SA D12 1-4' and DIXON ROAD SA D13 1-4' were flagged as "UJ" for hexavalent chromium due to the matrix interference indicted from the matrix spikes.

3.3.6 FIELD DUPLICATES

Data for field duplicates were collected and analyzed for chemical constituents to measure the cumulative uncertainty (i.e., precision) of the sample collection, splitting, handling, storage, preparation and analysis operations, as well as natural sample heterogeneity that is not eliminated through simple mixing in the field. Field duplicates are two samples prepared by mixing a volume of sample and splitting it into two separate sample containers that are labeled as individual field samples.

Sample (DR-SUR-01) had a duplicate collected sample (DR-SUR-09). Sample (DIXON ROAD SA D12 1-4') had a duplicate collected sample (DIXON ROAD SA D12A 1-4'). Total Hexavalent Chromium (VI) was not detected in samples (DR-SUR-01), (DIXON ROAD SA D12 1-4'), or (DIXON ROAD SA D12A 1-4'). Total Chromium (VI) was detected at 5.6 mg/Kg in sample (DR-SUR-09). The RPD was calculated for all detected analytes. A sample calculation using Chromium (VI) detected in the first set of field duplicates follows:

$$(|5.6-0|)/[(5.6+0)/2] \ *100=5.6/2.8*100=200\ \%$$

The RPD for Chromium (VI) for the first set of field duplicates was calculated to be 200%, which is over the 100% RPD limit for soil samples, therefore Chromium (VI) was flagged as "J" and "UJ" in samples DR-SUR-09 and DR-SUR-01 respectively.

No Chromium (VI) was detected in the second set of field duplicates. Therefore, no further action is required.

3.3.7 GENERAL LABORATORY OBSERVATIONS

The MS/MSD percent recoveries were biased-low for Cr-6. Therefore, the Cr-6 results in the associated field samples may be biased-low.

3.4 TOTAL MERCURY (Hg) SAMPLES BY METHOD 7471A

3.4.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

3.4.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

Total Mercury samples were analyzed within the recommended HT of 28-days for soil samples. No discrepancies were noted.

3.4.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively.

Laboratory method blank (MB) samples (MBLK-45250-45250) and (MBLK-45281-45281) were run with this SDG. Mercury was detected under the PQL in MB sample (MBLK-45250-45250). All samples associated with MBLK-45250-45250 had Mercury detected at 10x the level detected in the blank therefore no further action was required. There was no mercury detected in MB sample (MBLK-45281-45281).

3.4.4 LCS RECOVERY RESULTS

The LCS serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS is fortified with each analyte of interest and analyzed with each batch of samples. The LCS accuracy performance is measured by %R.

LCS samples (LCS-45250-45250) and (LCS-45281-45281) were within acceptable QC limits of 80-120 % for mercury. Therefore, no further action was taken.

3.4.5 MS/MSD RECOVERY RESULTS

The spiked sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The MS/MSD accuracy performance is measured by %R.

MS sample (1212105-18AMS) and MSD sample (1212105-18AMSD) were extracted from soil sample (DIXON ROAD SA D12 1-4'). MS sample (1212105-20AMS) and MSD sample (1212105-20AMSD) were extracted from soil sample (DIXON ROAD SA D13 1-4'). Mercury was with in QC limits of 75-125%R for both sets of MS/MSD.

3.4.6 FIELD DUPLICATES

Data for field duplicates were collected and analyzed for chemical constituents to measure the cumulative uncertainty (i.e., precision) of the sample collection, splitting, handling, storage, preparation and analysis operations, as well as natural sample heterogeneity that is not eliminated through simple mixing in the field. Field duplicates are two samples prepared by mixing a volume of sample and splitting it into two separate sample containers that are labeled as individual field samples.

Sample (DR-SUR-01) had a duplicate collected sample (DR-SUR-09). Sample (DIXON ROAD SA D12 1-4') had a duplicate collected sample (DIXON ROAD SA D12A 1-4'). Total Mercury (Hg) was detected at 0.97 mg/Kg in sample (DR-SUR-09), 0.87 mg/Kg in sample (DR-SUR-09), 0.61 mg/Kg in sample (DIXON ROAD SA D12 1-4'), and 0.99 mg/Kg in sample (DIXON ROAD SA D12A 1-4')

The RPD was calculated for all detected analytes. A sample calculation using the Total Mercury (Hg) detected in the first set of field duplicates follows:

$$(|0.97-0.87|)/[(0.97+0.87)/2] \ *100=0.1/1.84* \ 100=5.43\ \%$$

All calculated RPD values for Total Mercury (Hg) were below the 100 % RPD limit for soil samples. Therefore, no further action is required.

3.4.7 GENERAL LABORATORY OBSERVATIONS

Samples DR-SUR-01, DR-SUR-02, DR-SUR-03, DR-SUR-06, DR-SUR-07, DR-SUR-08, DR-SUR-09, Dixon Road SA D3 4-8', Dixon Road SA D7 1-4', Dixon Road SA D11 4-8', Dixon Road SA D12 1-4', , Dixon Road SA D12A 1-4' and , Dixon Road SA D13 1-4' required dilutions for Mercury, therefore elevated reporting limits are provided.

3.5 TCLP MERCURY (Hg) SAMPLES BY METHOD 1311/7470A

3.5.1 SAMPLE HANDLING

COC documentation and sample receipt forms were reviewed to ensure requested analyses were performed and that samples arrived at the laboratory intact. Samples were collected on December 3, 2012 and were received on ice by the laboratory at 4.0 °C, inside QC limits of 4 ± 2 °C.

3.5.2 SAMPLE PRESERVATION AND HOLDING TIME (HT)

TCLP Mercury samples were analyzed within the recommended HT of 28-days for soil samples. No discrepancies were noted.

3.5.3 BLANK RESULTS

The purpose of laboratory and/or field blank analysis is to determine the existence and magnitude of contamination resulting from laboratory and/or field activities respectively. Laboratory method blank (MB) samples (MBLK-45247-45247 and MBLK-45282-45282) were run with this SDG.

Mercury was detected below the laboratory-supplied Practical Quantitation Limit (PQL) in MB sample MBLK-45282-45282 and MBLK-45282-45282.

The following samples were not detected at greater than 10 times the level of the blank, therefore the Mercury results were raised to the Reporting limit (RL) and flagged as "U": DR-SUR-01-TCLP, DR-SUR-02-TCLP, DR-SUR-03-TCLP, DR-SUR-04-TCLP, DR-SUR-05-TCLP, DR-SUR-06-TCLP, DR-SUR-07-TCLP, DR-SUR-08-TCLP, DR-SUR-09-TCLP, Dixon Road SA D3 1-4'-TCLP, Dixon Road SA D3 4-8'-TCLP, Dixon Road SA D3 8-12'-TCLP, Dixon Road SA D4 1-4'-TCLP, Dixon Road SA 6 1-4'-TCLP, Dixon Road SA D6 4-8'-TCLP, Dixon Road SA D7 1-4'-TCLP, Dixon Road SA D11 4-8'-TCLP, Dixon Road SA D12 1-4'-TCLP, Dixon Road SA D12A 1-4'-TCLP, and Dixon Road SA D13 1-4'-TCLP.

3.5.4 LCS RECOVERY RESULTS

The LCS serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. The LCS is fortified with each analyte of interest and analyzed with each batch of samples. The LCS accuracy performance is measured by % R.

The LCS samples (LCS-45282-45282 and LCS-45247-45247) were within acceptable QC limits of 80-120 % R for mercury.

3.5.5 MS/MSD RECOVERY RESULTS

The spiked sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The MS/MSD accuracy performance is measured by % R.

An MS sample (1212105-40AMS) was performed on soil sample (DIXON ROAD SA D13 1-4'). The % R for mercury was 96.2 % R, which is within the acceptable QC limits of 75 – 125 % R. An MSD sample (1212105-40AMSD) was performed on soil sample (DIXON ROAD SA D13 1-4'). The % R for mercury was 96.3 % R, which is within acceptable QC limits of 75-125 % R. The RPD between the MS and MSD samples was calculated to be 0.0515 % RPD, which is under the 20 % RPD limit for MS/MSD samples. Therefore, no further action was taken.

An MS sample (1212105-38AMS) was performed on soil sample (DIXON ROAD SA D12 1-4'). The % R for mercury was 93.1 % R, which is within the acceptable QC limits of 75 – 125 % R. An MSD sample (1212105-38AMSD) was performed on soil sample (DIXON ROAD SA D12 1-4'). The % R for mercury was 91.4 % R, which is within acceptable QC limits of 75-125 % R. The RPD between the MS and MSD samples was calculated to be 0.0515 % RPD, which is under the 20 % RPD limit for MS/MSD samples. Therefore, no further action was taken.

3.5.6 FIELD DUPLICATES

Data for field duplicates were collected and analyzed for chemical constituents to measure the cumulative uncertainty (i.e., precision) of the sample collection, splitting, handling, storage, preparation and analysis operations, as well as natural sample heterogeneity that is not eliminated through simple mixing in the field. Field duplicates are two samples prepared by mixing a volume of sample and splitting it into two separate sample containers that are labeled as individual field samples.

Sample (DR-SUR-01) had a duplicate collected sample (DR-SUR-09). Sample (DIXON ROAD SA D12 1-4') had a duplicate collected sample (DIXON ROAD SA D12A 1-4'). TCLP Mercury (Hg) was detected below the Laboratory Reporting Limit in samples (DR-SUR-01) and (DR-SUR-09), (DIXON ROAD SA D12 1-4'), and (DIXON ROAD SA D12A 1-4'). Since TCLP Mercury was not detected in these samples, no further action is required.

4.0 OVERALL ASSESSMENT OF DATA

The analytical results meet the data quality objectives defined by the applicable method and validation guidance documentation. The analytical data is usable and acceptable as reported by the laboratory with the additional flags as noted above.

ALS Environmental

Re: **Dixon Road SA** Work Order: **1212105**

Dear Santino,

ALS Environmental received 40 samples on 04-Dec-2012 for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 108.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Alex Csaszar

Case Narrative

QC and Sample Comments:

Batch 45199, Method PCB_8082_S, Sample 1212105-18A MS: "S" flags for 1016 and 1260 are due to matrix interference. Elevated levels of aroclors 1248 and 1254 in parent sample led to high recoveries. RPD's are in range.

Batch 45199, Method PCB_8082_S, Sample 1212105-18A MSD: "S" flags for 1016 and 1260 are due to matrix interference. Elevated levels of aroclors 1248 and 1254 in parent sample led to high recoveries. RPD's are in range.

Batch 45200, Method PEST_8081_S, Sample PLCSS1-45200: The LCS recovery was above the upper control limits for 4,4' - DDT. All sample results in the batch were non-detect. No qualification is necessary for this analyte.

Batch 45200, Method PEST_8081_S, Sample PLCSS1-45200: The LCS recovery was above the upper control limits for Methoxychlor. All sample results in the batch were non-detect. No qualification is necessary for this analyte.

Batch 45212, Method CR6_7196_S, Sample 1212105-18AMS: The MS recovery was below the control limits for CR6. The reported result in the parent sample may be biased low.

Batch 45212, Method CR6_7196_S, Sample 1212105-18AMSD: The MSD recovery was below the control limits for CR6. The reported result in the parent sample may be biased low.

Batch 45225, Method CR6_7196_S, Sample 1212105-20AMS: The MS recovery was below the control limits for CR6. The reported result in the parent sample may be biased low.

Batch 45225, Method CR6_7196_S, Sample 1212105-20AMSD: The MSD recovery was below the control limits for CR6. The reported result in the parent sample may be biased low.

Batch 45234, Method PCB_8082_S, Sample 1212105-20A MS: "S" flags for 1016 and 1260 are due to matrix interference. Elevated levels of aroclors 1248 and 1254 in parent sample led to high recoveries. RPD's are in range.

Batch 45234, Method PCB_8082_S, Sample 1212105-20A MSD: "S" flags for 1016 and 1260 are due to matrix interference. Elevated levels of aroclors 1248 and 1254 in parent sample led to high recoveries. RPD's are in range.

Batch 45235, Method PEST_8081_S, Sample PLCSS1-45235: The LCS and/or LCSD

recovery was above the upper control limits for Methoxychlor. All sample results in the batch were non-detect. No qualification is necessary for this analyte.

Batch 45237, Method ICP_6020_S, Sample 1212105-18AMS: The MS recoveries were outside of the control limits for Barium, Cadmium and Chromium; however, the results in the parent sample were greater than 4x the spike amount. No qualification is required for these analytes.

Batch 45237, Method ICP_6020_S, Sample 1212105-18AMS: The MS recovery was outside of the controls for Lead; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte.

Batch 45237, Method ICP_6020_S, Sample 1212105-18AMS: The MS recovery was below the control limits for Silver. The reported result in the parent sample may be biased low.

Batch 45237, Method ICP_6020_S, Sample 1212105-18AMSD: The MSD recoveries were outside of the controls limits for Barium, Cadmium and Chromium; however, the results in the parent sample were greater than 4x the spike amount. No qualification is required for these analytes.

Batch 45237, Method ICP_6020_S, Sample 1212105-18AMSD: The RPD between the MS and MSD was outside of the control limits for Chromium. The reported result in the parent sample should be considered estimated for this analyte.

Batch 45237, Method ICP_6020_S, Sample 1212105-18AMSD: The MSD recovery was below the control limits for Selenium and Silver. The reported results in the parent sample may be biased low.

Batch 45244, Method ICP_6020_W, Sample 1212105-40AMSD: The MSD recovery was below the control limits for Barium. The reported result in the parent sample may be biased low.

Batch 45248, Method ICP_6020_S, Sample 1212105-20AMS: The MS recovery was below the control limits for Selenium. The reported result in the parent sample may be biased low.

Batch 45248, Method ICP_6020_S, Sample 1212105-20AMS: The MS recoveries were outside of the controls for Barium, Cadmium, Chromium and Lead; however, the results in the parent sample were greater than 4x the spike amount. No qualification is required for these analytes.

Batch 45248, Method ICP_6020_S, Sample 1212105-20AMSD: The MSD recoveries were outside of the control limits for Barium, Cadmium, Chromium and Lead; however, the results

in the parent sample were greater than 4x the spike amount. No qualification is required for these analytes.

Batch 45248, Method ICP_6020_S, Sample 1212105-20AMSD: The RPD between the MS and MSD was outside of the control limits for Selenium. The reported result in the parent sample should be considered estimated for this analyte.

Batch 45281, Method HG_7471_S, Sample 1212105-20AMS D: The MSD recovery was outside of the control limits for Mercury; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required for this analyte.

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
SD	Serial Dilution
TDL	Target Detection Limit

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
µg/L	Micrograms per Liter
mg/Kg-dry	Milligrams per Kilogram Dry Weight
mg/L	Milligrams per Liter
